

Case Study ... Mobile Solutions for INMAN

The Customer

INMAN (Information Management Australia) is a Melbourne based, services firm that distributes, integrates and supports best of breed solutions to business issues. INMAN teams works within the Asia Pacific area. INMAN people provide the expertise and resources required for successful change management.

The Contribution

THINKKronicity undertook the design, coding and testing for a PocketPC based application for asset inspection in the utility industry. THINKKronicity also provided logistics support for the project and made a number of presentations to management and staff to support the work.

This application was used to replace a previous DOS based hand-held computer. THINKKronicity worked closely with the field staff and back-office staff to ensure the application met all stake-holder requirements.

THINKKronicity also developed and delivered training for field and supervisory staff, and also installed the desktop application in sites throughout Victoria.

The application was extended over time to incorporate a number of additional requirements. The flexibility designed into the application ensured that this was a viable option.

The Result

The final application incorporates:

- *Finger based operation of all features.*
- *Dynamic menu-driven operation.*
- *Easy to read displays for outdoor use.*
- *Dynamic data-entry fields, allowing for:*
 - *Numeric data*
 - *Text data*
 - *Toggle values*
 - *Value Lists*
 - *Image Lists*
 - *GPS Position*

... And met all user requirements!

"We were delighted by the high service levels, attention to detail and professionalism displayed by THINKKronicity. We look forward to working together with THINKKronicity again in the near future."
